A new update for Adobe, this would be the last version of the last Release to provide more direct, rather than consolidated, “Migration to Lightroom” tools. (Adobe went to this path in the previous Lightroom Release due to the fact that some of the direct migration tools were causing problems for some people.) Personally, I believe it was the right move, as I mainly used previous Releases to convert Lightroom Catalog Information into the Lr4 format. Now, I replace the whole Catalog with an updated Lightroom Catalog, which I explain later. It’s a good start, but it’s never perfect. However, version 5 isn’t just about a new numbering scheme. It includes some huge enhancements that, for the first time, make it more like a program designed to do one thing—image editing. (On the other hand, that’s always been a primary function of Lightroom, the other Adobe product that processes photos.) For example, I can now tag images from inside Lightroom 5, and group them by name, date, and location. Now, even if I have to leave Lightroom to do something else, I’ll know where all the images are, so there are no worries of them being lost or forgotten. Adobe’s stated aim in this release was to provide users more features to make the development of their photos easier and to encourage their use. I’ve made “tweaks” to the program myself, but I have also used Photoshop since its debut, so I know at some point I might have to develop something new to make use of the latest features.

Adobe Photoshop is a complex piece of software but the basic function remains the same. You start

with a blank canvas (usually a white image). In the sample image below, I've used the full stack capabilities of Photoshop to create a fun image entitled '#s', which will be used later in this tutorial. You can create collages, panoramas, starbursts images, and more. You can retouch specific image areas, either manually or with automated tools. You can also use plugins to create your own collections. In the sample image below, I've started by creating a new canvas where I'm using a new type of brush called the Brush tool to paint a series of concentric circles onto the white canvas. (Actually, I use the default brushes provided by Photoshop. The concentric circle process is rather time-consuming, so I've used the Stroke & Fill dialog box to split the circle into circles of various sizes and colors. From the Fill dialog box, I've turned the Color Overlay setting on to create a gradient from a Colorize to a White fill color and I'm using the Linear gradient tool to make / minimize the color changes and create a gradient effect. Once the circles are created, I've taken a photo of the image to get a better idea of how it looks. The more I work with the brush tool in Photoshop, the more I get a feel for how this type of brush can produce interesting and unique textures, so I decided to add a texture fill panel to the image. Using the Brush tool, I can begin painting in that texture onto the canvas. It's a bit difficult to get started since I don't have a good feel for how far the brush will go so I need to do some trial and error. 933d7f57e6
